

“This presentation introduces the EU Mission 'A Soil Deal for Europe' (the Mission Soil) in the context of the broader EU's framework for soil protection and restoration. The Mission supports research and innovation in soil health in all land uses and pedo-climatic conditions all across the EU, being the soil health living labs the core of the Mission. The presentation describes the Mission, its main objectives and the state of play (investment and funded projects so far). The presentation provides information on the Slovenian participation in the programme and, more interestingly, resources on soil health for advisors, such as trainings, among others.”
